E-mail: Pieter.DeBleser@irc.vib-UGent.be

Mission

The bioinformatics core offers bioinformatics support for all members of the IRC, including:

- Assistance in the application of bioinformatics tools
- The operation of a help-desk
- The organisation of training sessions for common applications
- The provision of an environment enabling post-docs and graduate students to pursue specific bioinformatics research

Research

The general theme of the BioIT research is prediction of regulation of gene-expression and involves projects on promoter analysis, TFBS predictions, classification of co-regulated genes on the basis of their promoter characteristics and phylogenetic conservation of gene regulatory elements.
